

# Deb-Z

## **Problem statement:**

**Space debris or space junk** is basically discarded material from launch vehicles like rockets or parts of spacecraft that are left to roam around in orbit of Earth. It has been a major problem for satellites and space stations, risking collision and increasing haziness of space, creating problems in space exploration. Teams have to analyse and provide the economical solution to this problem.

## **Benefits:**

An individual will learn about problem analysis and pitching. They'll get to know about different ideas on the same problem they've been working on and will get exposure. If the problem is good enough it can be scaled to industrial start-ups.

## **Event Description:**

We will release the problem statement on 10th May(Morning), it will be mailed to all registered teams. Deadline of submission will be the 12th(evening). Then shortlisted candidates will get a mail informing about their selection and information about further judging process.

**Money required = 0.0**

**Price pool = 10k**
