Dementia

Duration - 2.5 hrs
Number of tasks - 6-7
Platform - Codechef
Individual participation

Rules and Regulations

1 You should not have multiple accounts on CodeChef. If you have, then you should delete all except one.

2 If you encounter any issue during an ongoing contest, post it as a comment on the respective problem page. The problem setter will help you get over it.

3 After the contest, all queries related to any specific problem should be posted on the editorial page of the problem on the discuss forum.

4 You should avoid sharing formulae, logic, or any other significant aspect of your code during a contest. If our plagiarism algorithm finds striking similarities between your code and someone else's, your account may stand the risk of being suspended.

5 Avoid using any online IDE's or code sharing sites like pastebin to share your code. In case you must, the responsibility of protecting your code lies solely with you. If you're using ideone, you can read about protecting your code on it here. Or you can use our IDE.

6 Taking help or using third party code is not bad. Passing it off as your own is. If you are taking your code from some other source, it is expected that you give the due attribution to the source in your code. It is mandatory. The third party code should have been available publicly before the relevant contest began, and not created during the contest. And if questioned, the proof of burden rests on you to prove this beyond a doubt.

7 But in case you have missed attribution to a third party code, and you get caught in our plagiarism check, then you have the option of proving to us that this was indeed a publicly available code.

8 Unless specified otherwise, you are expected to solve and code the problems yourself and not discuss with others.

Stay honest to the community. If you come across any wrongdoing, which hampers the decorum of the community on or off it, do report that to us. We will investigate the issue and take appropriate action to stop it.
