RULEBOOK

Event Type: A Team-based Scavenger Hunt.
Team Size: 2-4
Register here:
Registration deadline:
Event Date:

Basic Idea:

1. It is a problem-based Scavenger hunt where the story will progress as you keep on solving problems and finding clues. The problems are derived from a variety of fields ranging from Logical to Tech-based problems.
2. The requisite to solving a problem could be related to the story till that point or could be entirely independent so better read the sections of the story carefully and draw conclusions based on that. Hints will still be provided in the problems so that they don't seem too difficult to approach.

The Procedure :

1. The story and problems will be hosted on different platforms.
2. Along with the story section, a problem will be presented which will have self-explanatory clues on how to reach the next section of the event. Mostly it will involve finding the solution to the problem and it will be part of a link that will take you to the next section.
3. There is no time limit on how much time you take on any problem, it's entirely up to you. If stuck you can ask for a Hint or may even skip a question but for sure that comes with a Penalty!
4. Even though there is no time limit on each question, the time for the event is limited so all the problems must be solved in that time frame only.
5. Now comes the important part i.e. tracking your progress. After you all have registered with you and your teammates, a Discord Link will be shared in the chat of the meet which strictly you have to join for all the monitoring will be done there. The instructions on how to ask for hints, your separate channels, and how many points you scored will be provided on Discord itself after you all have registered.

Point System:

1. Each question has a set number of points that will be given for finding the correct solution to that and progressing to the next section.
2. Taking a Hint would only reward you with half the points whereas skipping a question would deduct some points from your already collected ones.

3. In the end, points of each team will be tallied and obviously, the one with the highest will win. If there is a draw wrt points, the one who completed early will be chosen.

Some Important Points:

1. There are no points to how fast you solve the problems, it's just your solution must be correct. Also, the coding problems (if any) are beginners friendly so cheers!
2. Please make sure you have a good internet connection so that you can enjoy the event to the fullest!
3. Do join the Whatsapp Group and Discord Server BeforeHand to avoid last minute confusions.

Prize Pool:
